

21.	Reports Received
	Irrelevant & Sensitive Report to be discussed at the next safety & quality meeting
	- NNU Thematic Review-8th February 2016 There was a higher than expected mortality rate on NNU in 2015. Cases have been reviewed at NNIRG, perinatal mortality review or neonatal review meetings and action plans have been made. An obstetric thematic review did not identify any common themes or identifiers that might be responsible for the rise in mortality in 2015. The aim of the neonatal meeting was to review the cases again as a multidisciplinary team with an external reviewer and tertiary level neonatologist to assess: • Were all action points completed • Any new areas of care improvement • Any possible common themes • Discuss if further action is required There was no common theme identified in all the cases
